

PENTATR@INING 2025

INFECTION PREVENTION AND CONTROL IN PAEDIATRIC SETTINGS

An Interactive Training Course

Scan to register

Online learning

Our innovative online programme comprises 13 in-depth and thought-provoking training modules, brought to you through the dedicated tutoring of our international panel of expert trainers. Together we will explore the basics of epidemiology, statistics and implementation science, outbreak investigation, setting up surveillance mechanisms for IPC, Personal Protective Equipment (PPE) usage, challenges and solutions for IPC in LMICs, tools for IPC and AMS programs, a wealth of further educational resources – not to mention unique networking opportunities!

Online learning: 10th March – 11th May

Residential workshop

Our experienced international faculty, including many authors and tutors of the online course, will deliver a bespoke 2-day residential training workshop in October. The practical on-site workshop will cover a range of best practices, including insertion methods, access and maintenance of catheters, as well as comprehensive simulation scenarios that will consolidate the online learning in a condensed and fully interactive face-to-face training. The programme is purposefully structured in a way that maximises teacher/student interaction and encourages delegates to be proactive participants. The residential workshop venue (in either Greece or Cyprus) will be confirmed in early 2025.

Residential workshop: 3rd – 4th October

What you can expect

Our fully immersive course will improve the professional capacity of even the most remote healthcare workers around the globe in the prevention, control and management of infections in maternal and child health. Most healthcare workers, whether paediatric ID specialists or infection control nurses, have theoretical knowledge but lack skills in more practical aspects of implementing IPC. Our course aims to provide a comprehensive, focused and multidisciplinary understanding of IPC, spanning from the basics of infection prevention to the implementation of IPC programs.

Registration fees
